

Grade 11 Chemistry RST

Many of you will be going into Chemistry next year and will need to draw upon the material you learned in this course to be successful. For this year's summative assignment your task will be to create a Survival Guide to SCH3U.

This guide should cover all of the units of the course, outline important concepts, and give a summary of what you have learned. Try to make this survival guide as useful as you can for yourself or other students in the future. It would also be beneficial for you to include examples and diagrams to help in your descriptions.

You are free to construct your survival guide using any platform you see fit, some students may choose to make a booklet, website, slideset, document, etc... Your focus should be on making it as practical as possible while still being visually appealing.

You must include a video lesson, where you teach a concept from one of the units. Include this video lesson in your survival guide.

The rubric is on the back of this page.

Please place a link to your assignment here!
