Lesson Assignment: Solving Problems

Solving Problems

After a recent hurricane, the community decided there was a need for more pet friendly shelters. There are two possible locations in the community where the shelter could be built. The town is looking for students like you to share your input and propose where you think the new shelter should be built.

You are more than willing to help solve this local problem and agree to make a presentation explaining your decision.

For your presentation you must:

- Read the geographic information provided on page 2
- Consider what is best for the local community given the information you learned about natural disasters
- Propose a location for the new shelter
- Write a one-page explanation of your proposal
- Support your argument with information gathered from the geographic information provided and lesson content

Lesson Assignment: Solving Problems

Use the following geographic information about the two proposed locations to make your decision:

Location A

Location A is located five miles outside of town, near a major interstate. It is close to a hospital and gas station. Not many people live in this area because it is mostly open land. New subdivisions are being planned because there is a beautiful view of the city from the top of the hill.

Location B

Location B is located one mile from the downtown, close to the harbor. Many families live in the area because it is close to the riverside park, school, and shopping center. There are many apartment buildings in the area, and the local fire station is located nearby. The narrow streets in this part of town sometimes make driving through town difficult.
